

**MINISTRY OF SCIENCE AND HIGHER EDUCATION OF THE RUSSIAN FEDERATION, MINISTRY  
OF SCIENCE, HIGHER EDUCATION AND INNOVATION  
OF THE KYRGYZ REPUBLIC**

Kyrgyz-Russian Slavic University  
named after the first President of the Russian Federation B.N. Yeltsin

## Endocrinology

### Work program of the discipline (module)

Assigned to the **Therapies No1 (Pediatrics and Dentistry)**  
Curriculum 31.05.01 (RF), 310501\_22\_4 ld in.plx  
Specialty, 560001 - KR General Medicine (for foreign students)

Qualification **Specialist**

Form of study **Full-time**

Total labor intensity **2**

Hours according to the including:  
classroom classes 48  
independent work 23,7

Types of control in semesters:  
Credit with a grade of 8

#### Distribution of hours of the discipline by semesters

| Semester<br>(<Course>.<Semester of course>)            | 8 (4.2) |      | Total  |      |
|--|---------|------|--|------|
| Weeks  | 17      |      |  |      |
| Type of classes  | UP      | WP   | Type of  | UP   |
| Lectures   | 16      | 16   | Lectures   | 16   |
| Practical  | 32      | 32   | Practical  | 32   |
| Contact work during the period of theoretical training | 0,3     | 0,3  | Contact work during the period of theoretical training | 0,3  |
| Including int.   | 3       | 3    | Including  | 3    |
| Total room.  | 48      | 48   | Total  | 48   |
| Contact work   | 48,3    | 48,3 | Contact  | 48,3 |
| Himself. Work  | 23,7    | 23,7 | Himself.   | 23,7 |
| Total  | 72      | 72   | Total  | 72   |

(<Course>.<Semester of course>) **8(4.2)**  
Weeks 17

The program was compiled by:  
*Senior Lecturer Uvaidillaeva F.T.*

Reviewer(s):

*Doctor of Medical Sciences, Professor, Head of the Department of Hospital Therapy with a Course of Hematology of the KSMA, Mamatov S.M*

*Candidate of Medical Sciences, Associate Professor of the Department of Therapy<sup>2</sup> of the LD specialty, Dzhailobaeva K.A.*

Work program of the discipline

developed in accordance with the Federal State Educational Standard 3++:

Federal State Educational Standard of Higher Education - Specialist in the Specialty 31.05.01

General Medicine (Order of the Ministry of Education and Science of the Russian Federation dated 12.08.2020 No 988)

Compiled on the basis of the curriculum:

Specialty 31.05.01. - Russian Federation, 560001 - Kyrgyz Republic General Medicine

approved by the Academic Council of the university on 26.06.20

The work program was approved at the meeting of the department

Protocol from

Program duration: 2020 - 2025 academic year

Head. Head of the Department

---

### 1. OBJECTIVES OF MASTERING THE DISCIPLINE

|     |   |
|-----|---|
| 1.1 | The purpose of the discipline is to form students' fundamental knowledge, skills and abilities in the specialty of endocrinology. |
|-----|---|

### 2. THE PLACE OF THE DISCIPLINE IN THE STRUCTURE OF THE EDUCATIONAL PROGRAM

|                             |   |
|-----------------------------|---|
| Cycle (section) of the PLO: | B1.O  |
| <b>2.1</b>                  | <b>Requirements for the preliminary training of the student:</b>  |
| 2.1.1                       | Biochemistry  |
| 2.1.2                       | Normal physiology   |
| 2.1.3                       | Practicum in Physiology   |
| 2.1.4                       | Anatomy   |
| 2.1.5                       | Topographic Anatomy and Operative Surgery   |
| 2.1.6                       | Psychology of communication   |
| 2.1.7                       | Psychiatry, Medical Psychology  |
| 2.1.8                       | Practice in Emergency Medical Manipulations (Fundamentals of Emergency Care)  |
| 2.1.9                       | Latin   |
| 2.1.10                      | Bioethics   |
| 2.1.11                      | Pharmacology  |
| 2.1.12                      | General Surgery   |
| 2.1.13                      | Practical training to obtain professional skills and professional experience in the positions of paramedical personnel (Assistant procedural nurse) |
| 2.1.14                      | Propaedeutics of Internal Diseases  |
| 2.1.15                      | Occupational diseases   |
| 2.1.16                      | Practical training to obtain professional skills and professional experience in the positions of paramedical personnel (Assistant ward nurse)       |
| 2.1.17                      | Faculty Therapy   |
| 2.1.18                      | Therapeutic Practice (Physician Assistant)  |
| 2.1.19                      | Pathological anatomy  |
| 2.1.20                      | Orientation Practice (General Care for Therapeutic Patients)  |
| 2.1.21                      | Immunology  |
| 2.1.22                      | Fundamentals of research work   |
| 2.1.23                      | Radiation diagnostics   |
| 2.1.24                      | Pathophysiology, clinical pathophysiology   |
| <b>2.2</b>                  | <b>Disciplines and practices for which the development of this discipline (module) is necessary as a previous:</b>                                  |
| 2.2.1                       | Medical Rehabilitation  |
| 2.2.2                       | Sports Medicine   |
| 2.2.3                       | Immunoprophylaxis of infectious diseases  |
| 2.2.4                       | Infectious diseases   |
| 2.2.5                       | Practice in emergency medical manipulations (Assistant anesthesiologist - resuscitator)   |
| 2.2.6                       | Faculty Surgery   |
| 2.2.7                       | Hospital surgery  |
| 2.2.8                       | Anesthesiology, Resuscitation, Intensive Care   |
| 2.2.9                       | Surgical Profile Practice (Physician Assistant)   |
| 2.2.10                      | Outpatient surgery  |
| 2.2.11                      | Faculty Therapy   |
| 2.2.12                      | Hospital Therapy  |
| 2.2.13                      | Outpatient therapy with a course of gerontology   |
| 2.2.14                      | General Medical Practice (Outpatient Physician Assistant)   |
| 2.2.15                      | Research work   |
| 2.2.16                      | Family Medicine   |
| 2.2.17                      | Oncology, radiation therapy   |
| 2.2.18                      | Ophthalmology   |
| 2.2.19                      | Neurology, Medical Genetics, Neurosurgery   |

|        |                                      |
|--------|--------------------------------------|
| 2.2.20 | Gynecology                           |
| 2.2.21 | Outpatient Obstetrics and Gynecology |
| 2.2.22 | Clinical pathanatomy                 |

### 3. COMPETENCIES OF THE STUDENT FORMED AS A RESULT OF MASTERING THE DISCIPLINE (MODULE)

#### OPK-5: Able to assess morphofunctional, physiological conditions and pathological processes in the human body to solve professional problems

|                    |   |
|--------------------|---|
| <b>Know:</b>       |   |
| Level 1            | Basic morphofunctional, physiological states and pathological processes in the human body ;   |
| Level 2            | Specifics of the main morphofunctional, physiological states, pathological processes of the human body in comparison;   |
| Level 3            | The main ways of differentiation and conclusion based on the results of the assessment of morphofunctional, physiological processes and pathological conditions of the patient. |
| <b>Be able to:</b> |   |
| Level 1            | To reveal the meaning of the main morphofunctional, physiological states and pathological processes in the human body;  |
| Level 2            | To reveal the meaning of the main morphofunctional, physiological states and pathological processes in the human body;  |
| Level 3            | To note the practical value of specific morphofunctional, physiological processes and pathological states of the human body.  |
| <b>Own:</b>        |   |
| Level 1            | Skills in determining the main morphofunctional, physiological states and pathological processes in the human body  |
| Level 2            | Methods of searching for and comparing various morphofunctional, physiological states and pathological processes of the human body  |
| Level 3            | • Skills of assessment, differentiation of the main morphofunctional, physiological and pathological states of the human body and one's own justification                       |

#### OPK-7: Able to prescribe treatment and monitor its efficacy and safety

|                    |  |
|--------------------|--|
| <b>Know:</b>       |  |
| Level 1            | Etiology, pathogenesis, clinical presentation of the main diseases with various nosological forms, methods of management and treatment of patients on an outpatient basis and in a day hospital; |
| <b>Be able to:</b> |  |
| Level 1            | - To compare various types and methods of treatment of patients with different nosological forms, to develop a plan for the treatment of diseases;   |
| Level 2            | - Manage and treat patients on an outpatient and day hospital basis  |
| Level 3            | Monitor the effectiveness and safety of the prescribed treatment at all stages of its implementation.  |
| <b>Own:</b>        |  |
| Level 1            | - Skills in analyzing various types of treatment of patients with different nosological forms;   |
| Level 2            | - Skills in managing and treating patients with various diseases on an outpatient basis and in a day hospital.   |

#### PC-4: Ready to collect and analyze the patient's complaints, medical history, examination results, laboratory, instrumental, pathoanatomical and other studies in order to recognize the condition or establish the presence or absence of the disease

|                    |   |
|--------------------|---|
| <b>Know:</b>       |   |
| Level 1            | - methods and means of collecting and analyzing the patient's complaints, his/her medical history, indications and contraindications for  |
| Level 2            | - the need to collect and analyze the patient's complaints, his medical history;  |
| Level 3            | - etiopathogenesis, clinical picture and diagnosis of the main diseases;  |
| Level 4            | - Indications and contraindications for the choice of additional clinical and paraclinical research methods   |
| <b>Be able to:</b> |   |
| Level 1            | - collect and analyze the patient's complaints, his medical history.  |
| Level 2            | - to prescribe laboratory, instrumental, pathological and other examinations in order to recognize the condition or establish the fact of the presence or absence of the disease. |
| Level 3            | - to conduct a survey, collect complaints and anamnesis from the patient;   |

|         |  |
|---------|--|
| Level 4 | - to draw up a model of pedigree for families with hereditary diseases;  |
| Level 5 | - Conduct a study of the clinical status;  |
| Level 6 | - to determine indications and contraindications for the choice of additional clinical and paraclinical methods of research; |

**Own:**

|         |   |
|---------|---|
| Level 1 | - skills in collecting and analyzing the patient's complaints, data of his anamnesis, interpreting the results of the most common methods of functional diagnostics used to identify pathologies of the blood, heart and blood vessels, lungs, kidneys, liver and other organs and systems; |
| Level 2 | - the skills of drawing up a medical history, the skills of prescribing the necessary laboratory and instrumental methods of examination in order to recognize the condition or establish the fact of the presence or absence of the disease;   |
| Level 3 | - skills of examining patients, carrying out the necessary diagnostic measures  |
| Level 4 | - skills in building a clinical diagnosis.  |

**PC-5: Capable of determining the main pathological conditions, symptoms, disease syndromes, nosological forms in patients in accordance with the International Statistical Classification of Diseases and Related Health Problems, X revision.**

**Know:**

|         |   |
|---------|---|
| Level 1 | Main types and methods of treatment of patients with various nosological forms. |
|---------|---|

**Be able to:**

|         |   |
|---------|---|
| Level 1 | collect and analyze the patient's complaints, medical history.  |
| Level 2 | - to prescribe laboratory, instrumental, pathological and other examinations in order to recognize the condition or establish the fact of the presence or absence of the disease. |
| Level 3 | - to conduct a survey, collect complaints and anamnesis from the patient;<br>- to draw up a model of pedigree for families with hereditary diseases;                              |
| Level 4 | - Conduct a study of the clinical status;<br>- to determine indications and contraindications for the choice of additional clinical and paraclinical methods of research;         |
| Level 5 | - to use methods and means of medical examination, diagnostic measures.   |

**Own:**

|         |   |
|---------|---|
| Level 1 | - skills in collecting and analyzing the patient's complaints, data of his anamnesis, interpreting the results of the most common methods of functional diagnostics used to identify pathologies of the blood, heart and blood vessels, lungs, kidneys, liver and other organs and systems; |
| Level 2 | - the skills of drawing up a medical history, the skills of prescribing the necessary laboratory and instrumental methods of examination in order to recognize the condition or establish the presence or absence of a disease;   |
| Level 3 | - skills of examining patients, carrying out the necessary diagnostic measures;<br>- skills in building a clinical diagnosis.   |

**PC-7: Able to determine the tactics of management of patients with various nosological forms**

**Know:**

|         |   |
|---------|---|
| Level 1 | - Etiology, pathogenesis, clinical presentation of diseases.                            |
| Level 2 | - the main directions and problems in the management of patients with various diseases. |

**Be able to:**

|         |   |
|---------|---|
| Level 1 | - To reveal the meaning of determining the tactics of managing patients with various diseases.  |
| Level 2 | - To compare different types and methods of treatment of patients with different nosological forms, to develop a treatment plan for diseases. |
| Level 3 | - To note the practical value of individual tactics for the management of patients with various nosological forms.                            |

**Own:**

|         |   |
|---------|---|
| Level 1 | - Skills in presenting and analyzing the etiology, pathogenesis of various clinical diseases to make a diagnosis.     |
| Level 2 | - Methods of searching for and comparing different methods of treatment of patients with different nosological forms. |
| Level 3 | - Possess the skills of determining the tactics of managing patients with diseases.                                   |

**PC-8: Ready for the management and treatment of patients with various nosological forms on an outpatient and day hospital basis**

**Know:**

|         |  |
|---------|--|
| Level 1 | - Etiology, pathogenesis, clinical presentation of the main diseases with various nosological forms. |
|---------|--|

|                    |   |
|--------------------|---|
| Level 2            | - Main types and methods of treatment of patients with various nosological forms.   |
| Level 3            | - Methods of management and treatment of patients with various nosological forms on an outpatient basis and in a day hospital.                |
| <b>Be able to:</b> |   |
| Level 1            | - Correctly identify this disease.  |
| Level 2            | - To compare different types and methods of treatment of patients with different nosological forms, to develop a treatment plan for diseases. |
| Level 3            | - Manage and treat patients on an outpatient basis and in a day hospital.   |
| <b>Own:</b>        |   |
| Level 1            | - Skills in analyzing various types of treatment of patients with different nosological forms.  |
| Level 2            | - Methods of searching for and comparing different methods of treatment of patients with different nosological forms.                         |
| Level 3            | - Skills in managing and treating patients with various diseases on an outpatient basis and in a day hospital.                                |

**PC-9: Ready to provide primary health care for sudden acute diseases, conditions, exacerbation of chronic diseases that are not accompanied by a threat to the patient's life and do not require emergency medical care**

|                    |  |
|--------------------|--|
| <b>Know:</b>       |  |
| Level 1            | - Clinical manifestations of acute and chronic diseases.   |
| Level 2            | - Methods of treatment and medical manipulations for pathological conditions and diseases.   |
| Level 3            | - General principles of treatment.<br>- Diseases, taking into account their etiology and pathogenesis;<br>- Knowledge of pharmacological groups and their interaction with each other. |
| <b>Be able to:</b> |  |
| Level 1            | - Link symptoms, examination data and indicators of laboratory and instrumental examination methods into a single whole and make the correct diagnosis.                                |
| Level 2            | - Prepare the patient, tools and medicines for the necessary manipulation.   |
| Level 3            | - Assess the stage of the disease and prescribe therapy appropriate to the stage of the disease.   |
| <b>Own:</b>        |  |
| Level 1            | - Skills to identify signs of an acute disease or exacerbation of a chronic disease.   |
| Level 2            | - Skills of etiological and pathogenetic therapy in treatment of diseases depending on the severity of the disease on an outpatient basis.   |
| Level 3            | - Skills and methods of providing medical care for acute and chronic diseases.   |

**PC-11: Ready to participate in the provision of emergency medical care for conditions requiring urgent medical intervention**

|                    |   |
|--------------------|---|
| <b>Know:</b>       |   |
| Level 1            | - algorithm of emergency medical care; basic medical diagnostic and therapeutic measures to provide first aid in emergency conditions requiring urgent medical intervention.  |
| <b>Be able to:</b> |   |
| Level 1            | - to select an individual type of care for the treatment of the patient in accordance with the situation: first aid, ambulance, hospitalization.  |
| <b>Own:</b>        |   |
| Level 1            | - a set of resuscitation measures for acute respiratory and circulatory disorders, with clinical death; know modern methods of resuscitation and intensive care when providing assistance to patients and victims in critical conditions of various etiologies. |

**PC-14: Capable of maintaining medical records.**

|                    |   |
|--------------------|---|
| <b>Know:</b>       |   |
| Level 1            | - List and characteristics of accounting and reporting medical documentation in medical organizations of a medical profile;                   |
| Level 2            | - Regulatory documentation adopted in healthcare, as well as documentation for assessing the quality and efficiency of medical organizations. |
| <b>Be able to:</b> |   |

|             |   |
|-------------|---|
| Level 1     | - Conduct medical and statistical analysis of health indicators of the attached population;                   |
| Level 2     | - Maintain medical records, including in electronic form.   |
| <b>Own:</b> |   |
| Level 1     | - Work skills and methods of accounting and reporting documentation of various types in medical institutions; |
| Level 2     | - Skills of comparative characterization of medical documentation of various nature in medical institutions.  |

**As a result of mastering the discipline, the student must**

|            |   |
|------------|---|
| <b>3.1</b> | <b>Know:</b>  |
| 3.1.1      | Medical documentation in endocrinology organizations.   |
| 3.1.2      | Medical documentation in endocrinology organizations.   |
| 3.1.3      | Pathological symptoms and syndromes in the most common endocrine diseases   |
| 3.1.4      | Etiology, pathogenesis and classification of the most common forms of endocrine diseases  |
| 3.1.5      | Clinical picture, diagnostic criteria and complications of diseases of the endocrine system.  |
| 3.1.6      | Modern methods of clinical, laboratory, instrumental examination of patients with endocrine pathology.  |
| 3.1.7      | The main groups of drugs used to treat endocrine diseases.  |
| 3.1.8      | Modern principles of treatment of diseases of the endocrine system within the framework of the nosological forms under consideration                    |
| 3.1.9      | Features of emergency care for endocrine diseases.  |
| 3.1.10     | Basic principles of prevention of typical forms of endocrine diseases   |
| <b>3.2</b> | <b>Be able to:</b>  |
| 3.2.1      | Use educational, scientific literature, the Internet for professional activities  |
| 3.2.2      | Be able to work with medical documentation, fill out medical histories, write prescriptions   |
| 3.2.3      | Conduct a survey, physical examination of the patient, assess his condition, examine the organs of the endocrine system                                 |
| 3.2.4      | Identify the main pathological symptoms and syndromes of endocrine diseases   |
| 3.2.5      | Draw up a plan of laboratory and instrumental methods of examining patients to confirm the suspected diagnosis, interpret their results.                |
| 3.2.6      | To determine the algorithm for diagnosing an endocrine disease, taking into account ICD-10, to formulate a detailed clinical diagnosis                  |
| 3.2.7      | Develop a treatment plan taking into account the course of the disease, select and prescribe drug and non-drug therapy                                  |
| 3.2.8      | Identify urgent and life-threatening conditions and provide emergency medical care for diseases of endocrine genesis                                    |
| 3.2.9      | To use methods of primary and secondary prevention of endocrine diseases based on evidence-based medicine in medical activities                         |
| <b>3.3</b> | <b>Own:</b>   |
| 3.3.1      | Skills in maintaining medical records, the technique of drawing up a medical history.   |
| 3.3.2      | Algorithm of general clinical examination of a patient with endocrine pathology;  |
| 3.3.3      | Algorithm of laboratory and instrumental examination in case of suspected endocrine pathology, interpretation of the results obtained during the study; |
| 3.3.4      | Skills in making a preliminary diagnosis with the formation of an examination plan  |
| 3.3.5      | • Skills in formulating a clinical diagnosis of patients with diseases of the endocrine glands, proceeding in a typical form;                           |
| 3.3.6      | Skills in the management and treatment of patients with endocrine pathology and assessment of the effectiveness of treatment                            |
| 3.3.7      | Methods of emergency care for endocrine diseases.   |
| 3.3.8      | • Skills in planning measures for the prevention and treatment of the most common endocrine diseases;   |

## 5. FUND OF ASSESSMENT TOOLS

### 5.1. Control questions and tasks

1. Epidemiology and classification of DM.
2. Risk factors for type 2 diabetes, diagnosis of carbohydrate metabolism disorders in the risk group.
3. Type 1 diabetes: etiology and pathogenesis.
4. Clinic, diagnosis of type 1 diabetes mellitus.
5. Type 2 diabetes: etiology and pathogenesis.
6. Clinic, diagnosis of type 2 diabetes mellitus.
7. Principles of treatment of type 2 diabetes: hypoglycemic oral drugs.
8. Indications for insulin therapy in type 2 diabetes mellitus.
9. Etiology, pathogenesis, classification of macrovascular complications of diabetes.
10. Features of CHD in patients with diabetes mellitus.
11. Etiology, pathogenesis, classification of microvascular complications of DM.
12. Classification of diabetic retinopathy. Principles of diagnosis and treatment.
13. Classification of diabetic nephropathy. Principles of diagnosis and treatment.
14. Classification of diabetic neuropathy. Principles of diagnosis and treatment.
15. Etiology and pathogenesis of diabetic ketoacidosis and coma.
16. Clinical variants of the course of diabetic ketoacidosis and coma.
17. Diagnosis, treatment of diabetic ketoacidosis and coma.
18. Hyperosmolar hyperglycemic states: diagnosis, principles of treatment.
19. Hypoglycemia, hypoglycemic coma: etiopathogenesis, clinic, diagnosis, emergency care.
20. Lactic acid acidosis: diagnosis, principles of treatment.
21. Differential diagnosis of comatose states in diabetes mellitus.
22. Diffuse toxic goiter (Graves' disease): etiology, pathogenesis.
23. Diffuse toxic goiter: clinic, diagnosis, principles of treatment.
24. Hypothyroidism: classification, etiology, pathogenesis, clinic, diagnosis, treatment.
25. Features of the clinic and diagnosis of secondary hypothyroidism.
26. Thyroiditis: classification, diagnosis, principles of treatment.
27. Hypoparathyroidism: diagnosis, principles of treatment.
28. Hyperparathyroidism: diagnosis, principles of treatment.
29. Iodine deficiency diseases: classification, role of iodine in the human body.
30. Prevention of IDD: mass, group, individual. Risk groups for IDD.
31. Endemic and sporadic goiter: diagnosis and treatment.
32. Chronic adrenal insufficiency: etiology, pathogenesis, clinic, principles of diagnosis and treatment.
33. Differential diagnosis of primary and secondary CNN.
34. Acute adrenal insufficiency, Addisonian crisis: principles of diagnosis and treatment.
35. Itsenko-Cushing's disease: etiopathogenesis, clinic, principles of diagnosis and treatment.
36. Differential diagnosis of Itsenko–Cushing's disease and syndrome.
37. Acromegaly: etiopathogenesis, clinic, principles of diagnosis and treatment.
38. Diabetes insipidus: etiopathogenesis, clinic, principles of diagnosis and treatment.
39. Hypopituitarism: etiopathogenesis, clinic, principles of diagnosis and treatment.
40. Somatotropic insufficiency. Etiopathogenesis of diseases of the anterior pituitary gland.
41. Etiopathogenesis of obesity, classification, obesity as a risk factor for other diseases.
42. Clinical manifestations of obesity.
43. Prevention and treatment of obesity.
44. Polycystic ovary syndrome (PCOS): pathogenesis, clinic, modern approaches to treatment.

### 5.2. Topics of term papers (projects)

The curriculum does not provide for writing a term paper on the discipline

### 5.3. Fund of Assessment Tools

1. THEORETICAL TASK The list of theoretical questions from paragraph 5.1. according to the subject of the section.

2. SITUATIONAL TASKS

3. TEST. List of test questions according to the subject of the section in APPENDIX 2

4. CURATION OF THE PATIENT.

3.1 Each student receives one patient with endocrine pathology for supervision.

3.2. The curator conducts an interview and examination of the patient according to the attached scheme, gets acquainted with the results of the available laboratory tests and images, with the treatment of patients.

3.3. Curation scheme:

- Passport details
- Complaints. First of all, complaints related to the disease that caused the hospitalizations, then - other complaints. Medical history. The onset of the disease, course, treatment in the past, causes, causes hospitalization.
- Life history (brief). Diseases suffered in the past.
- Objective examination data containing a summary of pathological data by system and organ

Clinical description of the patient's endocrine system. Survey data.

- Diagnosis, conclusion on supervision.

5. MEDICAL HISTORY OF A PATIENT WITH DIABETES MELLITUS

During the training in the first section, the student is given a patient with diabetes mellitus to supervise, he works out his skills by objective examination of the patient, learns to observe patients, develops clinical thinking and fills in the medical history according to the given scheme (APPENDIX 3).

6. REPORT WITH PRESENTATION. The student independently chooses the topic of the report in accordance with the topic of the section 1

**5.4. List of types of assessment tools**

1. Theoretical task
2. Patient Curation
3. Situational task
4. Report with presentation
5. Medical history

**6. EDUCATIONAL, METHODOLOGICAL AND INFORMATION SUPPORT OF THE DISCIPLINE (MODULE)**

**6.1. Recommended Literature**

**6.1.1. References**

| <b>6.3. List of Information and Educational Technologies</b>    |   |   |                      |
| <b>6.3.1 Competency-Oriented Educational Technologies</b>       |   |   |                      |
| 6.3.1.1   | Competency-Oriented Educational Technologies  |   |                      |
| 6.3.1.2   | Traditional educational technologies are lectures, practical classes focused primarily on the communication of knowledge and methods of action that are passed on to students in a ready-made form and are intended for the reproducing assimilation and analysis of specific samples. Lecture material is provided to students using multimedia equipment and periodic presentation of thematic patients.  |   |                      |
| 6.3.1.3   | Practical classes are most often held directly on the basis of the endocrinology department of clinics with mandatory visits to patients, independent supervision of patients, with visits to "Diabetes Schools", where patients are taught to control their disease. Innovative educational technologies are classes that form systemic thinking and the ability to generate ideas when solving various creative tasks. These include practical classes, during which a case is used - methodology, problem-activity learning, role-playing games, brainstorming techniques. |   |                      |
| 6.3.1.4   | Information educational technologies are the independent use of computer equipment and Internet resources by a student to perform practical tasks and independent work, as well as to familiarize themselves with Internet sources, photo and video materials in the relevant section. Preparation of lectures and presentations by the teacher.  |   |                      |
| <b>6.3.2 List of information reference systems and software</b> |   |   |                      |
| 6.3.2.1   | List of resources of the information and telecommunication network "Internet"   |   |                      |
| 6.3.2.2   | List of Information and Educational Technologies  |   |                      |
| 6.3.2.3   | Competency-Oriented Educational Technologies  |   |                      |
| 6.3.2.4   | Traditional educational technologies are lectures, practical classes focused primarily on the communication of knowledge and methods of action that are passed on to students in a ready-made form and are intended for the reproducing assimilation and analysis of specific samples. Lecture material is provided to students using multimedia equipment and periodic presentation of thematic patients.  |   |                      |

|          |  |
|----------|--|
| 6.3.2.5  | Practical classes are most often held directly on the basis of the endocrinology department of the clinic with mandatory visits to patients, independent supervision of patients, with visits to "Diabetes Schools", where patients are taught to control their disease.                       |
| 6.3.2.6  | Innovative educational technologies are classes that form systematic thinking and the ability to generate ideas when solving various creative problems. These include practical classes that use a case methodology, problem-based learning, role-playing games, and brainstorming techniques. |
| 6.3.2.7  | Information educational technologies are the independent use of computer equipment and Internet resources by a student to perform practical tasks and independent work, as well as to familiarize themselves with Internet sources, photo and video materials in the relevant section.         |

#### **7. MATERIAL AND TECHNICAL SUPPORT OF THE DISCIPLINE (MODULE)**

|     |   |
|-----|---|
| 7.1 | The discipline is taught on the basis of the City Clinical Hospital No1, where the Department of Therapy No1, a specialized department of endocrinology, the "School of Diabetes", a lecture hall, 8 classrooms, with a total area of 200 sq.m are located. (block of desks, couches, blackboards). The department is equipped with a multimedia complex (laptop, personal computer, projector). Students have access to information stands, posters, electronic library. |
| 7.2 | Practical training in the study of the program in pediatric endocrinology is carried out on the basis of the pediatric endocrinology department of the National Center for Maternal and Child Health (NCOMiD), where there is a classroom, a children's "School of Diabetes".   |
| 7.3 | Presentations of lectures on all sections of the discipline (PowerPoint)  |
| 7.4 | Computer classes (Leo Tolstoy's building, room 4/12, 4/15) with access to the Internet for independent work, familiarization with Internet sources, video materials.  |

#### **8. METHODOLOGICAL INSTRUCTIONS FOR STUDENTS ON MASTERING THE DISCIPLINE (MODULE)**

#### MODULAR CONTROL IN THE DISCIPLINE INCLUDES:

1. Current control: assimilation of educational material in classroom classes (lectures, practical, including attendance and activity), supervision of the patient, solving situational tasks and performing mandatory tasks for independent work
2. Midterm control: checking the completeness of knowledge and skills on the material of the module as a whole. The implementation of modular control tasks is carried out in writing, in the form of tests
3. Intermediate control is a completed documented part of the academic discipline, carried out in the form of summing up the medical history, solving situational problems.

#### BASIC REQUIREMENTS FOR INTERMEDIATE CONTROL

1. When appearing for tests, students are required to have record books with them, which they present to the examiner at the beginning of the exam or to the teacher at the test.
2. The teacher is given the right to give a credit without a survey to those students who scored more than 60 points for the current and midterm controls.
3. At the intermediate control, the student must correctly answer the theoretical questions of the ticket - (to know) and correctly complete the situational task (to be able, to possess).
4. During the intermediate control, the teacher sums up the results of the patient's supervision by students during the semester. Assessment of the intermediate control: - min 20 points - Questions to check the level of learning to know (if the student correctly formulates the basic concepts when answering the questions asked) - 20-25 points  
Tasks to check the level of learning BE ABLE and POSSESS (if the student correctly formulates the essence of the problem set in the ticket and gives recommendations for its solution) - 25-30 points - Tasks to check the level of learning to BE ABLE and POSSESS (in case of complete completion of the control task).

#### I. BASIC REQUIREMENTS FOR CURRENT CONTROL.

- When building a practical lesson, teachers adhere to the following general orientation plan: 1) Organizational stage of the lesson (time – up to 2%): a) roll call; b) homework on the following topic; c) motivation of the topic of this practical lesson; d) familiarization of students with the goals and plan of the lesson;
- Control and correction of the initial level of knowledge (time – up to 20%): a) variants of test control; b) correction of students' theoretical knowledge by the teacher;
- Stage of demonstration of practical skills and/or thematic patients by the teacher (time – up to 15%);
- Stage of independent work of students at the bedside (time – up to 45%) or solving situational problems (in the absence of a thematic patient);
- Final stage of the lesson (time – up to 18%): a) final final control of the formed practical skills and abilities in the analysis of patients examined by students b) final final control of the formed theoretical knowledge and skills, including by solving situational clinical problems; c) summing up the results of the practical lesson (the teacher's characterization of the students' fulfillment of all the goals of the lesson, and individual assessment of knowledge and skills).

#### II. RECOMMENDATIONS FOR THE ORGANIZATION OF INDEPENDENT WORK OF THE STUDENT

1. Tips for planning and organizing the time necessary to study the discipline. Recommended for the following

Study the time required for the study of the discipline: Study of the lecture notes on the same day, after the lecture – 10-15 minutes. Study of the lecture notes the day before the next lecture – 10-15 minutes. Study of theoretical material from the textbook and notes – 1 hour per week. Preparation for the practical lesson – 2 hours. Total per week – 3 hours 30 minutes.

2. Description of the sequence of actions of the student for understanding the material and its qualitative assimilation is recommended the following sequence of actions: After listening to the lecture and finishing classes, when preparing for the next day's classes, you should first review and think about the text of the lecture listened to today (10-15 minutes). When preparing for the next day's lecture, you need to review the text of the previous lecture, think about what it can be topic of the next lecture (10-15 minutes). During the week, choose a time (1 hour) to work with the recommended literature in the library. When preparing for the next day's practical classes, you should first read the basic concepts and approaches to the topic of homework. When performing an exercise or task, you must first understand what is required in the problem, what theoretical material should be used, and outline a plan for solving the problem.

3. Recommendations for the use of materials of the educational and methodological complex. It is recommended to use the methodological instructions for the course and the text of the teacher's lectures.

4. Recommendations for working with literature. The theoretical material of the course becomes more understandable when, in addition to listening to the lecture and studying the notes, books are also studied. It is easier to master the course, adhering to one textbook and notes. It is recommended, in addition to "memorizing" the material, to achieve a state of understanding of the topic of the discipline being studied. For this purpose, it is recommended to perform a few simple exercises for this topic. In addition, it is very useful to mentally ask yourself the following questions (and try to answer them): what is this paragraph about?, what new concepts have been introduced, what is their meaning?, what will it give in practice?.

5. Tips for preparing for midterm and intermediate controls. In addition to studying the lecture notes, it is necessary to use a textbook. In addition to "memorizing" the material, it is very important to achieve a state of understanding of the topics studied in the discipline. For this purpose,

it is recommended to perform several exercises on this topic after studying the next paragraph (them): what is this paragraph about?, what new concepts have been introduced, what is their meaning?, what will it give in practice?.

With In preparation for intermediate control, it is necessary to study the theory: definitions of all concepts and approaches to assessment to the state of understanding the material and independently solve several typical problems from each topic. When solving problems, it is always necessary to be able to interpret the result of the solution qualitatively.

6. Instructions for organizing homework. When doing homework, you must first read the basic concepts and approaches to the topic of the task. When doing an exercise or task, you must first understand what is required in the task, what theoretical material should be used, outline a plan for solving the problem, and then proceed to calculations and make a high-quality conclusion.

7. In preparation for intermediate and midterm controls, you need to study the theory: definitions of all concepts and approaches to assessment to the state of understanding the material and independently complete several typical tasks.

8. Working out missed classes. Control over the assimilation of the material of the discipline curriculum by students is carried out systematically

A student who has received an unsatisfactory grade in the current material is obliged to prepare this section and answer it to the teacher at an individual interview. A lecture missed without valid reasons must be worked out by the method of oral questioning by the lecturer or the preparation of an essay on the materials of the missed lecture within a month from the date of absence methods of working out missed lectures (questioning at practical lectures, test control, etc.). Practicing practical classes.-Each lesson missed by a student without a valid reason is practiced mandatory.

Missed classes must be worked out within 10 days from the date of absence. Missed classes without a valid reason are worked out no more than one lesson per day.

for a valid reason (illness, absences with the permission of the dean's office) are worked out according to the thematic material without taking into account the hours.- A student who has not worked out the absence within the established time frame is allowed to attend the next classes only with

the permission of the dean or his deputy in writing. It is not allowed to remove students who are poorly prepared for these classes from the next seminar.- for students who have missed seminars classes due to a long-term illness, the work should be carried out after the permission of the dean's office according to an individual schedule agreed with the department.- In exceptional cases (participation in interuniversity conferences, competitions, Olympiads, duty, etc.), the dean and his deputy, in agreement with the department, can exempt students from working out some missed classes.

#### RECOMMENDATIONS FOR PREPARING A PRESENTATION

Multimedia presentations are a type of independent work of students to create visual aids made with the help of a multimedia computer program PowerPoint. This type of work requires coordination of the student's skills in collecting, systematizing, processing information, designing it in the form of a selection of materials that briefly reflect the main issues of the topic under study, in electronic form

#### Presentation

materials are prepared by the student in the form of slides using Microsoft PowerPoint. Requirements for students to prepare a presentation and defend it in the classroom in the form of a report.

1. The topic of the presentation is chosen by the student from the proposed list of FOS and must be agreed with the teacher and correspond to the topic of the lesson.

2. Stages of preparing a presentation Drawing up a presentation plan (setting a task; goals of this work) Thinking through each slide (at first, this can be done manually on paper), while it is important to answer the questions: - how does the idea of this slide reveal the main idea of the entire presentation? - what will be on the slide? - what will be said? - how will the transition to the next slide be made?

3. Making a presentation using MS PowerPoint:

- It makes sense to be careful. Sloppily made slides (inconsistencies in fonts and indents, typographical errors in formulas) raise suspicion that the student-speaker approached the substantive questions half-heartedly.- The title page is necessary to introduce you and the topic of your report to the audience.- The number of slides is no more than 30.- The optimal number of lines on a slide is from 6 to 11.  
 - A common mistake is to read the slide verbatim. It is best if detailed information (definitions, formulas) is written on the slide, and the words tell their meaningful meaning. The information on the slide can be more formal and strictly stated than in speech.- The optimal switching speed is one slide in 1-2 minutes.- It is recommended to use more drawings, pictures, formulas, graphs, tables in the presentation. animation effects.- When explaining tables, it is necessary to say what the rows correspond to and what the columns correspond to.- Introduce only those notations and concepts without which it is impossible to understand the main ideas of the report.- In a short speech, you cannot repeat the same idea, even in other words - time is precious.- Any phrase must be said for some reason. Then the speech will be integral and leave a good impression.- The last slide with conclusions in

To do this, it is convenient to make a blank slide with one large Word object "Insert / Object / Microsoft Word Document", select its size once and multiply it on the required number of slides or the like; the Times font looks bad from afar. Be sure to set the MathType to the basic font size equal to the basic font size in the text. Never manually adjust the size of the formula by pulling it out by the corner.  
 4. A student is obliged to prepare and make a report at a strictly allotted time by the teacher, and on time.  
 5. Instructions to the speakers.- to communicate new information;- to use technical means; - to know and be well versed in the topic of the entire presentation;- to be able to discuss and quickly answer questions;- to strictly follow the established time limit: speaker - 10 min.; discussion - 5 min.; It should be remembered that the speech consists of three parts: introduction, main part and conclusion  
 The introduction should contain:- the title of the presentation;- the message of the main idea;- a modern assessment of the subject of presentation;- a brief list of the issues under consideration;- a lively interesting form of presentation; The main part, in which the speaker must deeply reveal the essence of the topic raised, is usually built on the principle of a report.  
 topic and wanted to get acquainted with the materials. At the same time, the logical structure of the theoretical block should not be given without visual aids, audio-visual and visual materials. The conclusion is a clear and concise generalization and brief conclusions that listeners are always waiting for.

#### RECOMMENDATIONS FOR WRITING AN ESSAY

It is important that the abstract: firstly, covers both scientific and social aspects of the problem; and secondly, presents both general theoretical provisions and specific examples. The abstract should be based on the study of several sources additional to the main literature . As a rule, these are special monographs or articles.  
 popular science magazines: "Children's Surgery", "Bulletin of the KRSU", "Health Care  
 The plan of the abstract should be the author's. It shows the author's approach, his opinion, analysis of the problem. All facts and borrowed considerations given in the abstract should be accompanied by references to the source of information. It is unacceptable to simply compose an abstract from pieces of borrowed text.  
 source and page brackets. The absence of quotation marks and references means plagiarism and, in accordance with the established scientific ethics, is considered a gross violation of copyright. The abstract is drawn up in the form of text on standard sheets  
 It begins with the title page, which indicates the name of the university, academic discipline, the topic of the essay, the surname and initials of the student, the number of the academic group, the year and geographical location of the university. This is followed by a table of contents indicating the pages of the sections. It is desirable to divide the text of the abstract into sections: chapters, subchapters and title them.  
 tables, diagrams, figures). The abstract ends with the sections "Conclusion" and "List of references". The conclusion presents the main conclusions, clearly formulated in thesis form and, usually, numbered.  
 The list of references should be compiled in full compliance with the current standard (rules), including a special arrangement of punctuation marks. To do this, it is enough to use as an example any book published by large scientific publishing houses: "GEOTAR-Media", "Progress", "Mir", "Publishing House of Moscow State University", etc.

The links are as follows: Author I.O. Title of the book. Place of publication: Publisher, Year of publication. The total number of pages in the book.  
 Author I.O. Title of the article // Title of the journal. Year of publication. Volume . No . Pages from to .  
 Author I.O. Title of the article / Title of the collection. Place of publication: Publisher, Year of publication.
